ENTSO-E principles: full commitment for monitoring

Implementation first, then monitoring

- ENTSO-E do commit to provide data, but the exact data set is undefined before the final methodologies.

Avoid double reporting

- Inconsistencies and double reporting is to be avoided – collection through NRAs is feasible, legit and well tested.
- Costly extra red tape is imposed on ENTSO-E perceived to stem from the lack of NRAs` alignment:
 - NRAs have authority while TSOs don't (no data available for TSOs).
 - Multi-layered process still exists as data provision to NRAs wont cease.

Avoid excessive burdens

- The frequency of ENTSO-E monitoring duties shall be respected

Examples:

Capacity calculation data – indicators under discussion

Each curtailments

Power plants below threshold
ACER`s claim on inefficiency

Bidding zone and cap calc
reports due in 2 and 3 years
