

# Grid Connection ESC

EUTurbines comments

Brussels  
14 December 2017

## Introduction

---

- EUTurbines reiterates its support to the initiatives promoted on specific topics (Compliance, CBA, frequency stability parameters workshops, etc.)
- EUTurbines expects that cooperation will continue and be further improved
- EUTurbines would like to raise awareness of a number of important issues that need careful consideration and discussion

## Expert Group / Workshops

---

### On Frequency Issues

- Workshops and debates were all interesting
- EUTurbines will keep providing constructive contributions in the next activities
- EUTurbines plans to provide comments and recommendations to the published draft IGDs

# Feedback on the Frequency Stability Workshops

EUTurbines suggestions to improve the process:

- Managing the activities following the example of the expert groups (collecting brainstorm discussion and sharing the editing of the IGD text)
- Reference to technology-specific information provided by ENTSO-E shall be shared and discussed in advance with relevant technology associations to ensure data accuracy

**Frequency stability related matters are very sensitive since the RfG integration at national level is on-going and available documentation is frequently used (and adopted), hence the importance to ensure data accuracy**

# THANK YOU
